

# PRODUCT FEATURES

## » Vacuworx Lifters:

- Fully self-contained tank/beam unit can be hooked up in a matter of minutes
- Double set of lugs to suit any single or double suction pad arrangement
- A 360° hydraulic rotator, which is standard, is typically powered by the excavator's bucket curl circuit
- Power source is a self contained diesel engine with electric start (other models available upon request)
- Quick fittings for easy pad change
- Visual-audible alarm for low vacuum
- Vacuum source is a rotary vane pump with oil circulation
- System is operated by electronic remote control, however, a hard wire control is available
- Our sophisticated wireless remote control has many fail safe features
- Only the suction pad(s) must be changed to switch to a different pipe diameter or application

- ## » Carrier: Hydraulic excavator, wheel or track type loader, crane, pipelayer, forklift and other applications.
- Note: The rotator is NOT recommended for use with a crane or pipelayer.
